SUMMARY

AI&DS undergraduate with internship experience in machine learning and hands-on experience developing full-stack and AI-powered applications. Strong foundation in computer science fundamentals, data structures and algorithms, and software development, demonstrated through internships, academic projects, and hackathons.

EDUCATION

Bachelor of Technology in Artificial Intelligence and Data Science
Velagapudi Ramakrishna Siddhartha Engineering College

2023 – 2027
CGPA: 8.77

TECHNICAL SKILLS

- **Programming Languages:** C++, Python, SQL
- **Frontend:** HTML, CSS, React
- **Backend:** Node.js, Express.js
- **Databases:** MySQL, MongoDB
- **AI/ML Libraries:** Scikit-learn, PyTorch, OpenCV
- **Tools & Platforms:** AWS, Git, VSCode, Git Hub
- **Coursework:** Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks

EXPERIENCE

AI & ML Intern | SmartBridge Educational Services Pvt. Ltd.

June 2026 – July 2026

[GitHub](#)

- Developed a ML-based **Human Development Index (HDI) Predictor** using Python, Pandas, NumPy, Scikit-learn, and Flask, and built an interactive web dashboard to predict a country's HDI using life expectancy, education, and GNI per capita.
- Performed data preprocessing, EDA, model training, evaluation, and Flask deployment, achieving an R^2 score of 97.23% and enabling real-time HDI prediction with automatic classification into four human development categories.

PROJECTS

GrocBankX - Secure Grocery Payment System

Feb 2026

Tech Stack: React, Flask, Scikit-learn, PostgreSQL, Face Recognition

[GitHub](#)

- Developed a secure grocery payment system using machine learning-based fraud detection and real-time face verification. used a Random Forest fraud detection model on an imbalanced credit card transaction dataset and applied SMOTE to improve fraud detection accuracy.
- Implemented risk-based authentication using webcam-based face verification with eye-blink detection to prevent spoofing attacks and reduce false transaction blocking.

Student Monitoring & Transit Management System

Jan 2026

Tech Stack: React + Vite.js, Node.js (Express), MongoDB Atlas, OpenStreet Maps API

[GitHub](#)

- Developed a web-based student transportation monitoring platform with live bus tracking, attendance management, and route visualization dashboards for admins and parents.
- Built real-time attendance analytics and automated SMS/email alert systems for student safety and transport monitoring.
- Implemented cloud-connected backend services for attendance synchronization, route tracking, and secure storage of transportation records using MongoDB Atlas.
- Published a research paper in IEEE conference proceedings based on this project.

CERTIFICATIONS

- AWS Certified AI Practitioner – AWS
- AWS Certified Machine Learning Engineer – Associate – AWS
- Oracle Cloud Infrastructure Generative AI Professional – Coursera
- Database Programming using SQL – Oracle Academy
- Programming in Modern C++ – NPTEL Swayam

ACTIVITIES & PARTICIPATION

- Participated in Webathon and TechXcelerate hackathons developing web-based applications.
- Participated in the AI/ML Hackathon conducted by the Ministry of Panchayati Raj and developed “GeoVision AI” for rural infrastructure mapping.
- Active public speaker and technology content creator focused on AI and innovation.
